

As time draws nearer to the first test in NUR 123, it is important that you continue to study the testable information on a regular basis. Do not try to cram everything into your heads the day before! Approach the exam as a challenge (let's see how many questions I can get right based on what I think the questions will be) versus a stressor

(oh, my God, I'm gonna flunk this thing and never become a nurse!).

Now that you have the proper mind set that you can pass this test, pull out the Test Review Guide. You can see the area of Nursing Diagnosis has the most number of questions, so let's start there.

Nursing Diagnosis (nsg dx) occupies the highest number of questions on this test because being able to identify and write nursing diagnoses in the clinical arena is paramount to being a successful nurse. Optimal patient outcomes are based on appropriate nursing diagnoses having been formulated by the professional nurse.
