

If you have never received more than a "3" on any math portion of a 123 test, you absolutely need to practice more problems in Math for Meds. If you have done all those problems and still need more practice we can post some more problems with the answers outside Halina's door. My concern is that if you cannot do these simple problems on the tests, you probably need some math tutoring from someone in the Learning Center to figure out where your obstacles are and correct your deficiencies. The problems are only going to get more complex as we finish this semester and poor math skills play a huge part in nursing drug administration errors and I know you don't want to be part of those statistics!

Math for test # 3 are very similar to Tests 1 & 2:

Convert % to decimals

Solve for X

Multiplying & dividing using decimals

Good Luck! Help each other. I will be in Duluth, MN for the w/e helping with Army family support of deployed soldiers. I will try to get on if I can find the facilities; otherwise, it will be Monday. You guys are smart and can help each other. As Nike says, "Just do it!"
