

We can post more questions but it is my guess that quantity is not what is needed but rather a need exists for a basic understanding/review of how to do these problems. You should absolutely not be embarrassed about admitting these deficiencies. Now is the time to seek help. However, if you don't tackle & correct the problem now, you will be devastated if an adverse pt event occurs based solely on your inability to do simple math calculations. Even if you have a calculator, you still have to know how to set up the problems. Enough preaching...

This test:

Differentiate larger of 2 numbers expressed in decimals

(.50 vs .75)

Calculating percentages (just as you calculate your grade after a test based on the # missed and the # total questions)

Adding decimals

Converting % to decimals & multiplying to arrive @ % of a number

Multiplying & dividing decimals
